What We Do...

- Business Intelligence
- Data Engineering
- Geospatial Analytics
- App Development
- Artificial Intelligence & Agentic
- Salesforce

Our Approach

Collaboration

We work closely with our clients to understand their goals and requirements, ensuring that the end product aligns perfectly with their vision.

Innovation

We stay at the forefront of technological advancements, using the latest tools and methodologies to deliver forward thinking solutions.

Quality

Our commitment to excellence ensures that our products are not only functional but also robust, reliable, and scalable.

Transparency

We believe in open and honest communication throughout the development process, keeping you informed every step of the way.

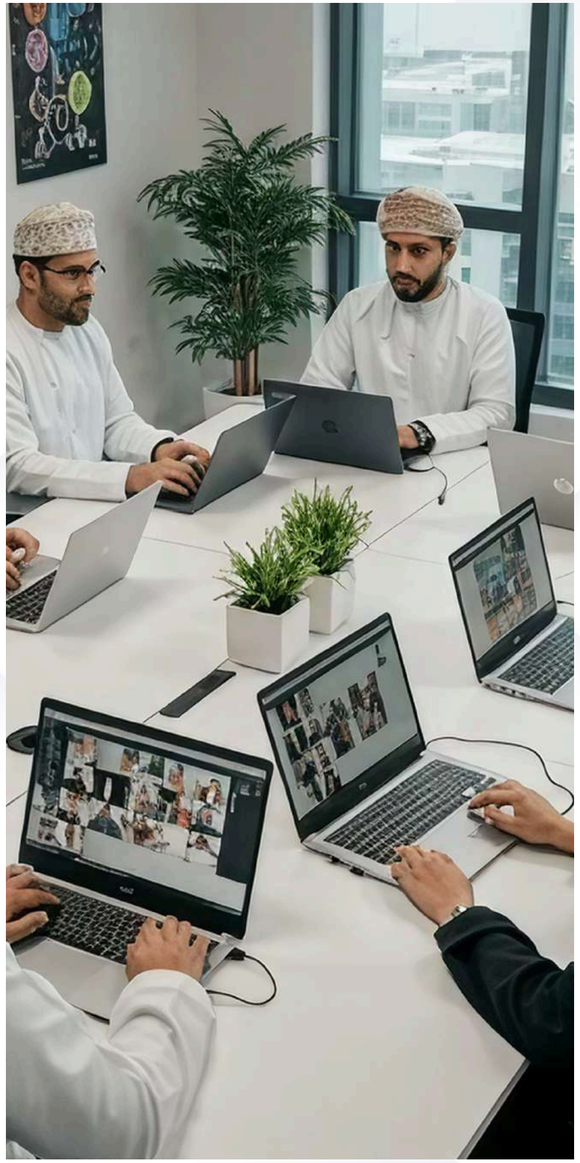
- Dundas BI
- DELTA LAKE
- talend
- MicroStrategy
- Informatica
- amazon QuickSight
- Google Data Studio



Industries We Work With

Asset Management	NBFC	Banking	Insurance
Logistics	Retail	E- Com	Pharmaceuticals
Oil & Gas	CPG	Cement	Tires

Data Engineering

Managed ETL Services

Managed ETL Services refer to cloud-based services that enable organizations to automate the process of extracting data from various sources, transforming it into a consistent format, and loading it into a target data warehouse or database.

Data Lakes Building

Data Lakes are centralized storage repositories that allow organizations to store all types of data (structured, semi-structured, and unstructured) in their native format at scale.

Data Warehouse Designing

Data Warehouse Designing involves the process of structuring and organizing data from multiple sources into a centralized repository, optimized for efficient data retrieval and analysis.

Data Architecture Design

This involves identifying data sources, defining data models and structures, establishing data security and governance policies, and determining how data will flow through different systems and applications to support business objectives.

SQL Support

SQL Support provides a standardized way to access and manipulate data stored in databases, allowing users to efficiently retrieve, insert, update, and delete data.

Data Architecture Development

Data architecture development refers to the process of designing, building, and maintaining the structure and organization of an organization's data assets.

Business Intelligence

BI Strategy & Roadmap

BI Strategy involves identifying goals and objectives, assessing data needs, selecting appropriate technologies and tools, establishing processes for data collection and analysis, and defining metrics to measure success.

Data Visualization

The purpose of data visualization is to help enterprises understand and analyze data more effectively by presenting it in a clear and visually appealing manner.

Enterprise BI Architecture

Enterprise BI Architecture is a framework for organizing data, analytics, and reporting capabilities to support business intelligence needs at scale.

Reporting and MIS Automation

Enterprises need reporting and MIS automation to streamline the creation and delivery of reports, enabling real-time access to critical information.

Dashboard Development

Dashboard development refers to the process of creating visual interfaces that display key performance indicators and metrics in a user-friendly manner.

Change Management Consulting

Change Management Consulting is the process of helping organizations manage and navigate through significant transitions or changes in their business operations, strategies, structures, or technologies.

Advance Analytics & AI

PoC and Prototype Building

This involves creating a small-scale model/working model to test the feasibility of an idea or concept. It helps enterprises to validate the potential of a product or service before investing significant time and resources into its development.

ML Model Integration with BI Tools

ML model integration with BI tools service refers to the process of incorporating machine learning models into business intelligence tools to extract insights and make data-driven decisions.

Use Case Development for ML

Use case development for a machine learning service involves identifying and defining specific scenarios or tasks where the ML service can be applied to solve problems or achieve goals.

Azure and AWS for ML

Azure and AWS are cloud platforms that offer machine learning services to help build, train, and deploy models at scale.

ML Model Development

ML model development and deployment include tasks such as data preparation, algorithm selection, model training, and deployment to production systems.

MLOps & Model Lifecycle Management

MLOps is the practice of deploying, automating, and monitoring ML models, while Model Lifecycle Management involves managing models from development to retirement.

Geospatial Analytics

Site Selection & Facility Planning

Geospatial analytics helps manufacturers choose optimal factory or warehouse locations by analyzing geography, infrastructure, and workforce proximity.

Logistics & Supply Chain Mapping

Visualize and optimize the flow of raw materials and finished goods across regions. Geospatial tools help identify route bottlenecks, evaluate delivery times, and monitor supply chain risks in real-time using geographic data overlays.

Asset Tracking & Field Operations

Track mobile machinery, vehicles, and field operations across multiple locations using GPS-enabled analytics. This improves operational visibility, maintenance scheduling, and resource allocation in remote or multi-plant setups.

Environmental Risk Assessment

Monitor environmental conditions such as air quality, weather, natural hazards, or proximity to water bodies to ensure compliance and safety. Geospatial analytics supports sustainability and disaster preparedness planning.

Utility & Energy Usage Mapping

Map energy consumption across plant locations to detect inefficiencies and opportunities for optimization. By layering energy data on geographical maps, manufacturers can better plan for renewable energy integration and cost reduction.

Workforce & Community Impact Analysis

Understand workforce distribution, commuting patterns, and community demographics around your facility locations. This supports decisions related to staffing, transportation planning, and community engagement.

App Development

Custom App Design & UI/UX

We create intuitive and visually engaging app interfaces tailored to your brand and user needs. Our design-first approach ensures a seamless user experience across all devices.

Native & Cross-Platform Development

Whether you need an Android, iOS, or cross-platform solution using Flutter or React Native, we build high-performance apps that are scalable and optimized for any device.

Backend Development & API Integration

We develop robust backend systems and integrate third-party APIs to power your app's core functionality — including databases, payment gateways, and cloud services.

Security & Data Protection

We implement industry-standard encryption, authentication, and compliance protocols to ensure your app and user data are secure at every level.

Testing & Quality Assurance

Each app undergoes rigorous manual and automated testing to ensure it's bug-free, responsive, and delivers a flawless user experience on all screen sizes.

Deployment & Ongoing Support

From App Store & Play Store publishing to post-launch monitoring, updates, and performance optimization — we offer full-cycle support to keep your app running smoothly.

Salesforce

Salesforce Implementation & Setup

We help you set up and configure Salesforce to match your business processes. From user roles to workflows and data models, we ensure a smooth and scalable implementation from day one.

Custom Development & App Building

Extend Salesforce functionality with custom-built apps, triggers, Apex code, and Lightning components tailored to your exact requirements for enhanced productivity and automation.

CRM Optimization & Automation

Streamline your customer relationship workflows with smart automation, lead nurturing, and sales funnel optimization using Salesforce tools like Flow, Process Builder, and AI.

Salesforce Integration Services

Connect Salesforce with third-party platforms like ERP, marketing tools, e-commerce, and more via secure APIs and middleware — enabling real-time data sync and 360° business visibility.

Analytics & Reporting Dashboards

Make data-driven decisions with real-time dashboards, sales forecasting, and customizable reports. Empower your teams with actionable insights from Salesforce Analytics Cloud or Tableau CRM.

Support, Maintenance & Training

We provide ongoing Salesforce support, user training, and system health monitoring to ensure performance, adoption, and continued success for your teams.
